

New High-Speed VocALign ARA Integration into Studio One

21 September 2016 – Epsom, UK

Synchro Arts' legendary automatic time-alignment software, VocALign, is now available with lightning fast, easy-to-use ARA integration in Studio One® Professional.

Since 1995, VocALign has been known as the unique, 'must have' time alignment tool in any audio professional's workflow. It provides vast time-saving and quality benefits when tightening double-tracked vocals and backing harmonies, aligning instrument tracks or sound effects, and syncing ADR or foreign language dubbing.

ARA (Audio Random Access) is a pioneering extension for audio plug-in interfaces. Co-developed by Celemony and PreSonus®. ARA technology enhances the communication between plug-in and DAW, and gives the plug-in and host instant access to the audio data.

Synchro Arts and PreSonus have worked together to integrate VocALign tightly into Studio One with a simple, streamlined workflow to provide automatic, instantaneous time alignment of the selected audio signals.

Carsten Gehle, Technical Director of Celemony Software GmbH comments:

"We're excited to have Synchro Arts as a new partner supporting the ARA plug-in platform. It allows VocALign to gain speed, convenience and ease-of-use which essentially represents the goal of our ARA technology."

Editors can save hours in the studio and let VocALign do the fine re-timing work automatically. Users drag and drop Guide and Dub audio events into VocALign, which instantly edits the Dub audio to match the timing of the Guide.

Two versions of VocALign with ARA are available as VST3 plug-ins:

- **VocALign Project 3** – the classic, basic VocALign with the new Studio One integration is now more affordable than before, and uses computer-based authorization. [Watch this video to find out more](#)

- **VocALign PRO 4** - the most advanced version of VocALign is operated in the same way as VocALign Project but has these additional and advanced features:

Several Dubs can be processed at the same time, advanced alignment handles more challenging feature differences, improved editing quality, user Synch points can provide targets for alignment, and longer signals can be processed.

Note: This version requires an iLok USB key for trial and full authorization.

Arnd Kaiser, PreSonus General Manager comments:

“Using VocALign ARA inside Studio One really feels like working in one piece of software; and its speed and ease-of-use redefines state-of-the-art audio time-alignment inside your DAW. Furthermore, [the new low price for VocALign Project](#) makes this solution even more attractive!”

Jeff Bloom, Managing Director of Synchro Arts concludes:

“We are incredibly grateful to Celemony and PreSonus for providing us with the ARA technology to make this VocALign integration so exceptional.”

VocALign licenses can be purchased from the [Synchro Arts](#) and [PreSonus](#) stores as well as Pro Audio Dealers world-wide.

The ARA versions of **VocALign Project** and **VocALign Pro** are available as free updates for existing **VocALign** license owners.

Other time-saving Synchro Arts Products:

For users who want even more creative power to automatically align pitch, timing and loudness, manually adjust tuning and timing or create double tracks - then Synchro Art's latest product, Revoice[®] Pro also integrates seamlessly with Studio One. [Compare Synchro Arts products here.](#)

About Synchro Arts

Synchro Arts Limited, based near London, UK, develops and sells audio processing software via a global dealer network and directly via www.synchroarts.com.

VocALign was introduced in 1995. More recently, Synchro Arts introduced the award- winning Revoice Pro software. This allows users to automatically transfer pitch, loudness, vibrato, intonation, loudness and timing from one signal to another; manually adjust time and pitch; as well as create fantastic, natural-sounding double tracks in seconds.

Revoice and VocALign are registered trademarks of Synchro Arts Limited.
